Project Overview

TrueStake is a decentralized platform for forecasting and analytics of real-world events, designed for both individual users and businesses, platforms, and organizations.

The platform combines:

- P2P interaction between users
- B2B and Enterprise integrations
- The ability to embed the platform into existing company ecosystems

TrueStake has already been launched as an MVP in the form of a Telegram Mini App. The platform operates fully on-chain, uses USDT as the settlement currency, and utilizes the TON blockchain exclusively as an infrastructure layer.

TrueStake:

- is not a casino
- is not a bookmaker platform
- is not classified as gambling

It is a tool for collective forecasting, analytics, and monetization of expectations.

Key Access Points:

- Investor platform: https://presale.truestake.net
- Web platform: https://truestake.net (under development)
- MVP: Telegram Mini App — https://truestake-net-bot.netlify.app/

The ecosystem is designed to be modular and scalable.

---

2. Current Product Status

TrueStake is not a concept and not a pre-product.

Already have:

- The MVP is launched and operational
- The Telegram Mini App is fully functional
- Smart contracts are implemented and undergoing final testing
- A non-custodial model is implemented
- All settlements are conducted in USDT
- A staking mechanism is implemented

- The team is fully formed
- Initial investments have been secured
- Regular investor reporting is in place
- The community is actively growing
- The web version is under active development

TrueStake is a live product with a team and a defined roadmap.

---

3. Platform Mechanics

The TrueStake workflow:

- Users create or join events
  (economic, business, political, social, and corporate events)
- Users place forecasts on event outcomes
- USDT funds are locked in smart contracts

While the event is active:

- Funds participate in staking
- Users receive additional yield

After the event is resolved:

- The outcome is recorded automatically
- Settlement is executed instantly
- Payouts are distributed on-chain

There is no centralized operator and no manual control.

---

4. Monetization Model

For users:

- No hidden fees
- Fees do not affect participant returns
- Users do not experience fees directly

TrueStake revenue is generated through:

- Protocol-level transaction fees
- Staking commissions

- Subscriptions (PRO access):
  - advanced analytics
  - professional tools
- Partnerships and integrations
- B2B and white-label solutions

---

5. Use of TON and Telegram

TrueStake does not depend on the TON ecosystem but uses it as an optimal infrastructure solution due to:

- High transaction speed
- Low operational costs
- Access to Telegram's user base
- Built-in crypto wallets
- Rapid scalability

All settlements are conducted strictly in USDT.
TON is used exclusively as a technical layer.

---

6. Market and Use Cases

Core segments:

- Prediction markets
- Web3
- Financial and socio-economic analytics

Target audience:

- Crypto users
- Traders and analysts
- Marketers
- Rating agencies
- Corporations and businesses
- Governmental and social institutions

Any event can be forecasted and monetized, including:

- Business decisions
- Corporate reporting
- Macroeconomic indicators

- Government initiatives
- Industry-specific and local events

TrueStake is a universal prediction market applicable across any niche.

---

7. Regulatory Position

TrueStake:

- is not a gambling product
- is not a casino
- is not a bookmaker activity

The platform belongs to the prediction markets category, which:

- is not classified as traditional gambling
- is increasingly recognized by regulators as a separate class
- aligns with the global shift from betting to analytical markets

---

8. Market Growth and Timing

The current market growth rate is approximately 20% per year.

Expected dynamics:

- Short-term — accelerated growth
- Mid-term — scaling
- Long-term — mass adoption

The market is still at an early stage of formation.

---

9. TSTK Token

- The token is created and has a limited supply
- Used as an investment asset
- Price increases from round to round
- Dilution is excluded
- Listing is planned

The token operates within a predefined platform development model.

---

10. Team

- The team is fully formed
- Roles and areas of responsibility are defined
- Task timelines are established
- All team members have public profiles
- The team is already accountable to investors

---

11. Roadmap

Current phase:

- Community growth
- User acquisition
- MVP scaling
- Partnership development

2026 (Q2):

- Full market launch
- Web version release
- B2B integrations
- Scaling

Future stages:

- Global expansion
- Liquidity growth
- Token listing
- Institutional partnerships

---

12. Conclusion

TrueStake:

- is already live
- is already scaling
- is already attracting investment
- is already building an ecosystem

The project is creating a universal prediction market designed for long-term growth and broad real-world application.
